FARM PRODUCTION AND INCOME FROM TURKEYS, 1941-42

Production of turkeys in 1942 was 32,691,000 birds, about the same as in 1941— 30 percent above the 10-year (1931-40) average, and 12 percent above the 5-year (1936-40) average. Production was up in 29 States, down in 14 States, and showed no change in 5 States.

Texas led all States in the production of turkeys in 1942 with a total of 3,625,000 birds, followed by Minnesota with 3,187,000 and California with 3,113,000. The West North Central States produced 33 percent of the Nation's turkeys in 1942, the West 27 percent, the South Central 17 percent, the East North Central 9 percent, and the South Atlantic and North Atlantic States 7 percent each.

Smaller Consumption by Producers: Producers of turkeys consumed 1,137,000 birds in 1942 -- 3.5 percent of the number produced. Turkey producers usually consume fewer birds when the price is high and a larger number when the price is low. Although about the same number of turkeys were produced in 1942 as in 1941, producers consumed 7 percent fewer birds in 1942 because of a 38 percent higher price.

Turkey Sales Larger: About 32,509,000 turkeys were sold from farms in 1942 -- 4 percent more than in 1941. About 3,260,000 birds sold in 1942 were late market birds carried over from 1941 and sold during the first 2 months of the year, while 4,052,000 were breeder hens disposed of after the breeding season. Of the 32,691,000 turkeys produced in 1942, about 2,350,000 late market birds, 4,015,000 breeder hens and 303,000 breeder toms were carried into 1943.

Price Highest of Record: The average price received for turkeys sold alive in 1942 was 27.4 cents per pound -- the highest since records were begun in 1929. The price averaged 19.8 cents in 1941; and 25.7 cents was the previous high, in 1929. Turkey prices in 1942 made less than the 5-year average seasonal decline from January to the low point of the year in June. From June to December prices increased 60 percent compared with 36 percent during the same period in 1941 and 13 percent the 5-year (1936-40) average increase for the period. Because of this rapid increase in prices during the last half of 1942, a larger proportion of the crop than usual was sold before the end of the year.

Cash Income Reaches Peak Level: Cash income from sales of turkeys in 1942 was \$144,944,000, the largest of record. Income was 48 percent above the total in 1941 and 164 percent above the 10-year average. California led all States in cash income from turkeys with \$18,964,000 in 1942, followed by Minnesota with \$14,089,000, and Texas with \$12,476,000. These three States -- with a large surplus production -- accounted for 31 percent of the United States income from turkeys last year.

Largest Per Capita Consumption: Per capita consumption of turkeys in 1942 was the largest in 14 years of record -- 3.76 pounds dressed weight compared with 3.58 pounds in 1941 and 2.53 pounds, the 10-year average. Consumption per capita has increased a fourth since 1939 and more than doubled since 1931.

*Prepared by S. A. Jones, Senior Agricultural Statistician, E. Smith Kimball, Agricultural Statistician, Paul W. Smith, Associate Agricultural Statistician, and Robert F. Moore, Associate Agricultural Statistician.

1/ Revised.

2/ Does not include young turkeys lost.

3/ Loss during the year of turkeys on hand January 1.

4/ Turkeys sold plus consumed in household of farm producers, and the plus or minus change in inventory. 5/ Change in inventory numbers during the year.
